We need to sit down and talk about your production methods in CR1…..we can't do what you are currently doing any more. This is a disaster waiting to happen. 100% of KCL that leaves this place MUST be tested …s/q. No exceptions.People can die. Have CR2 make 2x the normal lot next week….they make it every 2 weeks with 180 days bud…..why should you ever be short? If you are short then make from powder, send out samples, and we will ship in 3-4 days…no issue. 100% of all lots must be able to be tracked logically to it's origin. We are way too big to cut any corners.
